NVIDIA INCEPTION PROGRAM APPLICATION

Aegis Health AI

Your health intelligence, decoded.

Next-generation clinical-grade personal health intelligence bureau.
Transforming fragmented medical records into structured longitudinal narratives.

LEGAL & REGISTRATION

Entity: AEGIS HEALTH AI

Reg: UDYAM-MH-33-0782403

Ministry of MSME, Govt of India

Status: Bootstrapped & Operating

LIVE PLATFORM & STACK

Live URL: aegishealthai.co.in

Multimodal OCR & Vision AI

Multi-Agent Clinical Synthesis

Physician SBAR Reporting

FOUNDER CONTACT

Aniket Dhuri, Founder & AI Lead

Mumbai / Thane, Maharashtra

MARKET PAIN POINTS

The Problem: Clinical Fragmentation & Cognitive Friction

BURDEN #1

Fragmented Records

- Patient medical data is trapped in
- loose papers, PDF portals, and
- disconnected diagnostic labs.
-
- Patients lack a single chronological
- view of their longitudinal health,
- leading to redundant lab tests and
- delayed diagnoses.

BURDEN #2

Medical Jargon Opacity

- Raw lab reports contain hundreds
- of cryptic biomarker acronyms
- (e.g., eGFR, HbA1c, hs-CRP, Lipid subfracti
-
- Patients turn to unvetted web searches,
- generating unnecessary panic or
- ignoring severe clinical abnormalities.

BURDEN #3

Doctor Time Deficit

- Physicians spend under 7 minutes
- per patient consultation.
-
- Reviewing 20 pages of messy historical
- PDFs is cognitively impossible during
- clinical intake.
-
- Leads to missed cross-marker correlations
- and clinical oversight.

CORE VALUE PROPOSITION

The Solution: Aegis Personal Health Intelligence Bureau

INSTANT ONBOARDING

Multimodal Lab Digitization

- Instant ingestion of messy physical lab prints & PDFs.
- Precision extraction of test names, values, units & ranges.
- Zero manual transcription required by the patient.

DATA SYNTHESIS

Longitudinal Narrative Vault

- Unifies scattered reports into a chronological health twin.
- Tracks physiological biomarker trajectories across years.
- Visual radar charts for metabolic and cardiovascular trends.

CLINICAL INTELLIGENCE

Specialist Multi-Agent Panel

- Cardiology, Endocrinology, and Internal Medicine agents.
- Cross-correlates multi-lab metrics (e.g., Glucose vs Lipids).
- Strictly grounded insights with confidence indicators.

CLINICAL ACTIONABILITY

Physician-Ready SBAR Summaries

- Generates Situation-Background-Assessment-Recommendation memos.
- Bridges the doctor-patient communication gap.
- Helps doctors review months of history in 30 seconds.

SYSTEM DESIGN

Technical Architecture & Clinical Safety Guardrails

Four-Tier Clinical AI Pipeline

Tier 1: Multimodal Ingestion Layer

Processes raw images and PDFs via OCR vision models into strictly typed JSON biomarker schemas.

Tier 2: Secure Vault & Data Isolation

Encrypted storage with strict per-user boundary isolation. Zero cross-tenant data leakage.

Tier 3: Multi-Agent Clinical Inference

Parallel domain agents (Metabolic, Cardio, Renal) conduct chain-of-thought analysis with grounded citations.

Tier 4: Clinical Safety & Guardrail Engine

Deterministic emergency flag triggers, strict disclaimers, and clear advice to consult doctors. Zero autonomous prescribing.

Current Production Stack:

Frontend: React 19, Vite, Tailwind CSS 4.0 | Database: Secure Firebase Vault | AI Engine: Multimodal LLM Inference

Live Deployment: Automated CI/CD via GitHub Actions and Production Hosting at https://aegishealthai.co.in

NVIDIA SYNERGY

NVIDIA Technology Integration & Compute Roadmap

ACCELERATED INFERENCE

NVIDIA NIM & TensorRT-LLM

- Deploy containerized NVIDIA NIMs
- for domain-adapted medical LLMs.
-
- Leverage TensorRT-LLM to achieve
- 4x–8x inference throughput acceleration
- and sub-second response times.
-
- Enables instant interactive multi-agent
- lab interpretation.

MICROSERVICE SERVING

Triton Inference Server

- Concurrent multi-model execution
- serving OCR, embedding search, and
- clinical reasoning simultaneously.
-
- Optimized GPU memory utilization
- across dynamic batching.
-
- Reduces inference infrastructure
- costs by up to 60%.

HEALTHCARE AI TOOLKIT

NVIDIA Clara & BioNeMo

- Utilize NVIDIA Clara clinical NLP
- models for automated medical concept
- normalization (SNOMED, LOINC, ICD-10).
-
- BioNeMo integration for future
- genetic & molecular biomarker
- correlations.
-
- Enables hospital-grade diagnostic
- accuracy.

COMMERCIALIZATION

Market Opportunity & Sustainable Business Model

CONSUMER REVENUE

B2C Subscription (Freemium)

- Free Tier: Report digitization, personal vault, basic biomarker tracking.
- Aegis Pro ($7–$15/mo): Longitudinal agent panels, family hub profiles,
- cross-marker correlation trends, and doctor-ready SBAR export memos

ENTERPRISE B2B

B2B Diagnostic & Clinic APIs

- White-label API for diagnostic pathology labs to auto-generate
- plain-language report interpretations for patients.
- Clinical EHR plugin providing doctors with instantaneous 30-second SBAR
- pre-consult patient briefs.

TAM / SAM / SOM

Market Size & Growth

- Global Digital Health Market: Projected to reach $500B+ by 2030.
- Clinical Decision Support & AI Diagnostics growing at 24% CAGR.
- India & APAC emerging as highest-growth digital patient records secto

COMPETITIVE MOAT

Defensive Moat

- Proprietary structured biomarker extraction dataset & ontology.
- Longitudinal patient retention via multi-year health trend lock-in.
- Private on-prem/cloud GPU inference architecture compliant with DPDP & H

EXECUTION

Traction Milestones & 12-Month Execution Roadmap

Q2 2026: Foundation & Live MVP (Completed)

- Official incorporation under Govt of India Ministry of MSME (UDYAM-MH-33-0782403).
- Launched public production web platform at https://aegishealthai.co.in/ with automated CI/CD.
- Deployed multimodal lab report digitization, timeline tracking, and per-user vault isolation.

Q3–Q4 2026: Multi-Agent Intelligence & NVIDIA Inception (Current)

- Apply and onboard with NVIDIA Inception to leverage GPU cloud credits & NIM microservices.
- Scale multi-agent specialist panels (Cardiology, Endocrinology, Hematology) with metabolic trend engine.
- Implement automated SBAR summary export for physician consult preparation.

2027: Enterprise Clinical Pilots & Native Mobile Deployment

- Deploy Triton Inference Server on private GPU cloud for HIPAA/DPDP-compliant enterprise inference.
- Initiate pilot integrations with ambulatory clinics and diagnostic lab chains.
- Launch native iOS and Android apps with continuous wearable and biomarker sync.

LEADERSHIP

Founding Team & Inception Program Fit

LEADERSHIP PROFILE

Founder & AI Leadership

- Aniket Dhuri
- Founder & Lead AI Engineer
-
- Full-Stack Architect & AI Systems Builder
- Expertise across React 19, TypeScript, Python,
- Cloud Architectures, and Generative AI pipelines.
-
- Single-handedly architected and shipped the complete
- Aegis Health AI platform from scratch to production.
-
- Contact: aniket@aegishealthai.co.in
- Phone: +91 9969330257
- Location: Mumbai / Thane, Maharashtra, India

WHY NVIDIA INCEPTION

Why NVIDIA Inception is Critical

- 1. GPU Compute Acceleration:
- Cloud credits to run high-throughput multimodal OCR
- and low-latency multi-agent LLM inference.
-
- 2. Technical Mentorship & NIM Stack:
- Architecture guidance to transition pipelines to
- NVIDIA NIM, TensorRT-LLM, and Triton Inference Server.
-
- 3. Healthcare Domain Alignment:
- Collaboration with NVIDIA Clara team to establish
- clinical-grade medical NLP benchmarks.
-
- 4. Investor & Partner Ecosystem:
- Access to Inception Capital Connect to scale the venture.
